Sequence 15, Application US/09308935

Patent No. 626834

GENERAL INFORMATION:

APPLICATE La Thangue, Nicholas B

APPLICANT: La Thangue, Espide antagonists of DP transcription factors

TITLE OF INVENTION: Peptide antagonists of DP transcription factors

TITLE REFERENCE: 620-67

CURRENT PAPLICATION NUMBER: US/09/308,935

CURRENT PILING DATE: 1999-05-27

EARLIER APPLICATION NUMBER: BCT/GB97/03506

EARLIER PILING DATE: 1996-12-20

MUMBER OF SEQ ID NOS: 18

SOFTWARE: PatentIn Ver. 2.1

SEQ ID NO 15

LENGTH: 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              US-09-308-935-5

Sequence 17, Application US/09308935

Sequence 17, Application US/09308935

Sequence No. 626834

GENERAL INFORMATION:

APPLICANT: La Thangue, Nicholas B

APPLICANT: Bandara, Lasantha R

TITLE OF INVENTION: Peptide antagonists of DP transcription factors

TITLE OF INVENTION: Peptide antagonists of DP transcription factors

TITLE REFERENCE: 620-67

CURRENT APPLICATION NUMBER: US/09/308,935

CURRENT FILING DATE: 1999-05-27

EARLIER APPLICATION NUMBER: PCT/GB97/03506

SARLIER APPLICATION NUMBER: PCT/GB97/03506

SARLIER APPLICATION NUMBER: 1996-12-20

NUMBER OF SEQ ID NOS: 18

SEQ ID NO 17

Sequence 7148, Application US/09328352

Sequence 7148, Application US/09328352

Patent No. 6562958

GENERAL INFORMATION:

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER

TITLE OF INVENTION: NUMBER: US/09/328,352

CURRENT APPLICATION NUMBER: US/09/328,352

CURRENT FILING DATE: 1999-06-04

NUMBER OF SEQ ID NOS: 8252

LENGTH: 78
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                               US-09-900-147-16

Sequence 16, Application US/09900147

Patent No. US20020103121A1

GENERAL INFORMATION:
APPLICANT: La Thangue, Nicholas B

APPLICANT: La Thangue, Nicholas B

APPLICANT: Bandara, Lasantha R

TITLE OF INVENTION: Peptide antagonists of DP transcription factors

FILE REFERENCE: 620-67-69

CURRENT PILING DATE: 2001-07-09

PRIOR PILING DATE: EARLIER FILING DATE: 1999-05-27

PRIOR PELING DATE: EARLIER FILING DATE: 1999-05-27

PRIOR PILING DATE: EARLIER FILING DATE: 1996-12-20

NUMBER OF SEQ ID NOS: 18

Sequence 17, Application US/09900147

Patent No. US20020103121A1

GENERAL INFORMATION:

APPLICANT: La Thangue, Nicholas B

APPLICANT: La Thangue, Nicholas B

TITLE OF INVENTION: Peptide antagonists of DP transcription factors

TITLE OF INVENTION: Peptide antagonists of DP transcription factors

FILE REFERENCE: 620-67

CURRENT APPLICATION NUMBER: US/09/900,147

CURRENT FILING DATE: 2001-07-09

PRIOR FILING DATE: EARLIER APPLICATION NUMBER: 09/308,935

PRIOR FILING DATE: EARLIER FILING DATE: 1999-05-27

PRIOR FILING DATE: EARLIER FILING DATE: 1996-12-20

NUMBER OF SEQ ID NOS: 18

SCOFTWARE: Patentin Ver. 2.1

SEQ ID NO 17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ï

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 33458, Application US/09864761

Patent No. US20020048763A1

GENERAL INFORMATION:
APPLICANT: Penn, Sharron G.
APPLICANT: Rank, David R.
APPLICANT: Hanzel, David K.
APPLICANT: Chen, Wensheng
TITLE OF INVENTION: HUMAN GENOME-DERIVED SINGLE EXON NUCLEIC ACID PROBES USEFUL FOR TITLE OF INVENTION: GENE EXPRESSION ANALYSIS BY MICROARRAY
FILE REPERENCE: Acomica-X-1
CURRENT APPLICATION NUMBER: US/09/864,761
CURRENT PILING DATE: 2001-05-23
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

Tschauder S., Driessen A.J.M., Freudl R.;

"Cloning and molecular characterization of the secY genes from Bacillus licheniformis and Staphylococcus carnosus: comparative analysis of nine members of the SecY family.";

Mol. Gen. Genet. 235:147-152(1992).

-i- FUNCTION: THIS PROTEIN BINDS DIRECTLY TO 23S RIBOSOMAL RNA.

-i- SIMILARITY: BELONGS TO THE L15P FAMILY OF RIBOSOMAL PROTEINS.
                                                                                                                                                                                                                             "Complete genome sequence and comparative genomic analysis of an emerging human pathogen, serotype V Streptococcus agalactiae."; Proc. L. FUNCTION: Known to be required for the assembly of 30S particles and may also be responsible for determining the conformation of the 16S rRNA at the A site (By similarity).
L. SIMILARITY: BELONGS TO THE S14P FAMILY OF RIBOSOWAL PROTEINS.

The Complete genome sequence of the Gram-positive bacterium Bacillus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nature 390:249-256(1997).
-!- FUNCTION: ESSENTIAL FOR PROTEIN EXPORT.
-!- SUBCELLULAR LOCATION: Tail-anchored membrane protein (Potential).
-!- SIMILARITY: Belongs to the secE/SEC61-gamma family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Pfam; PF00584; SecB; 1.
